The characteristic quality of the Battle Creek Sanitarium Foods is the cooking or dextrinization of the farinaceous elements. It is this thorough cooking which renders toast more digestible than ordinary bread. This crude method, improved upon, has produced a series of health foods which are more digestible and nutritious than any others found upon the market. The chief of these is Granola, which is unequaled for brain and nerve building qualities. It has a rich, nutty flavor that is so much enjoyed by the athlete and invalid, and can be assimilated by the stemach of the dyspeptic as well as the robust. The genuine Granola hears a picture of the Sanitarium on the package. Sold in pound packages by gro-cers.

SUGGESTIONS FOR TABLE AND KITCHEN.

"The potent factor in proper food is its proper cooking." Primitive man may have been a vegetarian; though it was always, doubtless, as now, largely a matter of environment as to climate and food produc-tion. Whether he cooked his food or not vould be governed by the same laws. That he had a very early knowledge of heat spelled to foods we are aware of. It seems strange that a custom that dates so far into the dim past and has con-tinued down to the present time as a delitinued down to the present time as a daily and absolute necessity to all civilized beings should as yet, be so little advanced in practice among those most actively concerned in purveying to the needs of the body.

body.

One result of no little importance in cooking food is to render it more palatable. The proper cooking develops flavors and odors not noticeable in the raw foods. The two primary principles, therefore, in cooking foods are to bring out or develop new flavors and retain those present.

Cooking food facilitates mastleation by softening the tough or hard substances that surround or compose them. The teeth can divide and separate them more readily and they are more thoroughly mixed with the

As digestion begins in the mouth, it is very important that foods be thoroughly and slowly masticated, and also important that the teeth are in condition to perform important work in a satisfactory

ner.

A chemical change must naturally take place, and while the nature of the elements must undergo a change, it depends on the understanding of these elements, whether we destroy their usefulness or retain their character while converting them into more digestible forms. Cooking changes fibrous tissue into soluble gelatin changes starches into dearing and other substances more readily digested. Sugar is changed into caramel, which is similar to the dearin, but has been subjected to longer and greater heat.

to caramel, which is similar to the dextrin, but has been subjected to longer and greater heat.

The decomposition of fats by heat makes them more digestible, if the heating is properly done; otherwise uncooked fats are far more wholesome. Nature has supplied us with vegetable cits as well as butter and cream, which are suitable for consumption without cooking.

Fats give warmth, and warmth promotes digestion by increasing the supply of blood to the digestive organs. This increases the secretion of digestive fluids.

The stimulating effect of food is very noticeable, and hence the renson for serving hot soups before dinner. A cup of hot tea or glass of hot milk has the same effect, but the forner is simply a stimulant, and the latter a sufficient food within itself, while the hot soup possesses both characteristics in a very moderate degree, and is more suitable for the purpose intended.

While all these changes are necessary to promote good digestion, heat performs another very important service; it destroys parasites that may exist and renders harmless any dangerous bacteria that may have found lodgment in our foods. The dangerous parasites, known to exist in potk, require this meat to undergo a therough cooking, which, it is safe to say, it seidom gets; hence it is the cause of the most learned, and it is often attributed to sources very foreign to the real cause—badly cooked meat.

DESMOND CONSIDERS LANZER A GOOD CATCH

Diamond Thief Apparently a Favorite With the Ladies.

LETTERS TELL IT.

Chief of Detectives Desmond is of opin-ion that Charles Langer, who ran into the arms of Lieutemant Johnson after stealing pair of diamond earnings from the Cowrthwalt loan office, No. 719 Pine street, noon yesterday, is a very shrewd criminal and regards his capture as an imoriant one. Up to the present time the Chief has been

mable to locate the man, although he has sweated him assiduously and obtained a full confession of the job that led to his incarceration.

From letters found on him and the gen-eral "cut of his jib," it is evident that Lanzer is no ordinary sweak thief, and it equally evident that he is a favorite with the fair sex.

A letter written by his mother, "A. Remington," from New York City, tells how on young woman with \$5,000 in her own right and a well-to-do paps is pining away for love of him. The name of this admirer is given as Edna Mason and her address No. 1109 Lehigh street, Easton, Pa. The let ter urges Charles to "have some sense and marry Edna.

Chairman Hopp gave him to understand that the campaign in the Twenty-first District would be conducted from Chleago and the local Middle-of-the-Road Populists would have to pay their own expenses in spelibinding the farmers and absoring men. This was not neording to any game mentioned in Hoyle.

The culmination came when the Pierce ticket was sprung against him. Then Harder laid traps for Chairman Hopp for the purpose of exposing the whole affair to the people.

Pierce is a coal miner, His name was suggested and urged by James A. Chairman Hopp wrote an antograph letter under date of August 25, which expresses his anxiety about the Republicans doing something. It is interesting the fellows. They, say work will be done and confess its need, etc., but insist their slowness is unavoidable until Uncle Melicator on September 2. I am confident fellows here mean to be fair, but are delayed in opening up, account no finances. They expect it daily, but not later than Labor Day."

In a letter dated August 29 Mr. Hopp announces that he is still on the trail; that action seems slow, but he feels confident that all will be well in the end, and "as soon as I can see my man I will communicate with you."

Louis Quellmaiz, formerly of Belleville, who has been working in a saddlery shop in Chicago and talking Populism on the street corners in that city, has had considerable to do with the Hopp schemes in Southern Illinois. He is charged with circulating petitions among Republicans, on the quiet, to nominate Pierce, and he also stated on one occasion that he got 175 to put a Populist ticket up in the Forty-eighth Senatorial District. On September 2 Mr. Harder wrote Hopp that he had met Quelimaiz "and got enough out of him to see you in a different way," and Harder thereupon broke off all communications from Quelimaiz to Harder, all tending to support the general story.
